

Analyze your production data

Optimize performance, minimize downtime and improve your ability to hit production targets

VERDAZO enables you to quickly and easily:

- › Identify and prioritize wells based on Lost Production and investigate anomalies with custom workflows
- › Monitor every well's daily production and save engineers at least 2 hours/day (approximately \$45,000+ savings/engineer/year)
- › Improve communication and collaboration between head office and the field
- › Perform well reviews more quickly, more often and with better insights
- › Identify wells with workovers and assess their effectiveness
- › Target reductions in downtime and reduce unscheduled repairs and maintenance
- › Identify deviations from forecast as they happen and improve your ability to hit production targets
- › Identify non-compliance criteria before submitting to regulatory agencies
- › Generate type-well curves using industry best practices

Verdazo Analytics enables Oil & Gas companies to target efficiencies, optimize performance and add millions to the bottom line. VERDAZO software is purpose-built for Oil & Gas and offers unmatched capabilities for all stages of the well lifecycle. Verdazo Analytics also offers Machine Learning predictive analytics services. Learn why so many companies trust Verdazo Analytics to help them take their businesses to the next level at www.verdazo.com.
